

Bluetooth Access for Hospitality Locking Systems

Allows guests and staff to access rooms with smartphones via bluetooth - Skip the queue at reception and facilitate remote check-in.

Product Summary

This system uses secure key credentialing and Bluetooth technology to allow hotel guests to download their assigned key to their smartphone for easy access to their guest room and other access-controlled areas. It is designed to give guests a seamless journey—from parking to elevators to their room, better facilitating late-night check-ins and reducing queues at the front desk. There is also no need to have a network allowing the guest to avoid roaming charges.

Key Features

- ✓ No queuing at the front desk
- ✓ Enhanced guest experience – Can be integrated into hotel apps
- ✓ Keycards are not required – reducing the transfer of bacteria from guest to guest and cost effective for the hotel as they don't have to purchase replacement cards.
- ✓ High level of security (Most people lock their phone with a pin)
- ✓ Can work on multiple applications (Rooms, lifts, car parks, spas)

Applications

- ✓ Hotel or guesthouse bedrooms
- ✓ Student Accommodation
- ✓ Build-to-rent apartments
- ✓ Elevators
- ✓ Car parks
- ✓ Spa or Gym Facilities
