

# Case Study

**Project:** Ulster Independent Clinic

**Architect:** Turkington McGowan Partnership

**Main Contractor:** MSM Contracts

**KCC**  
GROUP

## An integrated door, automation & access solution for renowned healthcare facility

We worked closely with the design team on a detailed specification for this healthcare project. We created an integrated access strategy combining access control with electro-mechanical locking and door automation to facilitate secure access for staff and to manage the flow of people throughout the building. We also provided a bespoke master key system for maximum security and control of access to restricted areas within the building.

The project consisted of a substantial extension to the existing healthcare building. With our partners in Elite Doors we were able to provide a range of high performance doorsets to meet the needs of the building and its many users across the lower and upper floors in the building. These high performance doorsets were provided with integrated ironmongery, automation and access control as appropriate in a variety of finishes including PVC-u and laminate. Several doors required integrated vision panels with privacy control for monitoring patients. We worked closely with the client and the other sub-contractors on the project in order to provide the Clinic with an all-encompassing solution.

- ✓ Cleanroom doors
- ✓ Door automation
- ✓ Vision Panels
- ✓ Architectural Hardware
- ✓ Touch-free access & activation
- ✓ Timber doors
- ✓ Electronic Locking
