

# Did you know that KCC do **Movable Walls**

## Create a smarter, safer and more flexible working environment

Choosing to create a more flexible working environment doesn't have to mean major construction. Our movable wall solutions allow for a more flexible use of space within a building while offering excellent **acoustic properties and insulation values**. This makes them ideal for creating smaller meeting spaces or offices within one large meeting or conference room. With a variety of finishes to choose from, the system runs smoothly along a track by means of ball-bearing trolleys for a superior end user experience.

Our Movable Walls can be more than 15 metres in height and are designed to meet the strictest fire safety requirements. We partner with some of the few manufacturers in Europe who have developed moveable wall systems which are acoustically rated up to 58dB (Rw). They are also available in a semi-automatic variation and have a wide range of fully customisable surface finishes from silk to metal and anything in between.

### Suitable Applications

- Hotels & Restaurants
- Leisure facilities
- Workshop environment
- Manufacturing environments
- Healthcare environments
- Educational facilities
- Commercial sector
- Residential
- Conference halls

# High performance & functionality

## Fire protection

Able to withstand flames for up to 60 minutes (E and EI)

## Acoustics

Our acoustic movable wall systems offer superior sound proofing options with sound insulation up to 58dB (Rw)

## Slimline

Slimline & lightweight options available designed to eliminate the need for floor guides and make the system easy to operate.

## Flexible design

Extensive design options that include curved walls and tracks, walls containing doors and concealed vertical and fire seals for improved aesthetics.

## Key Features

- Easily and efficiently re-configure your interior space to adapt to changing business needs
- Smooth, ball-bearing operation for a superior end user experience
- Made-to-order and available in bespoke sizes and with multiple finishes
- Bespoke sizes up to 3000mm x 4000mm
- Semi-automatic variations available
- Available as EI30 or EI60 fire resistance
- Multiple stacking possibilities
- Versatile and durable with options for strong metal self supporting frame
- Option to include single or double doors and/or glass panels
