

Did you know that KCC do **Speedlanes & Turnstiles**

Securing every entry/exit point with the right gate solution

Speedlanes & turnstiles access control systems are an ideal crowd control solution, allowing you to effectively manage and monitor the flow of people in to and out of your building. Both solutions offer a reliable, effective means of managing access. For areas that require barrier infill to close off gaps, we can provide glass barriers to complement speedlanes and speedgate turnstiles.

Speedlanes

Ensuring the safety of your staff and visitors to your building doesn't need to restrict their freedom of movement. Our speedlane solution forms a seamless and fluid barrier that enables a fast and steady flow of people through your entrance, without compromising your security.

A unique detection system accurately tracks the passage of a single authorised user and effectively prevents fraudulent or unauthorised entry by a second party. The ergonomic design of the speedlane units provides an intuitive and user-friendly experience.

Benefits of Speedlanes

- Electronic single person & fraudulent entry detection
- High flow rate to ensure the fast, efficient processing of users, allowing passage of up to 40 people per minute
- Aesthetically-pleasing, slim and transparent design
- Minimal footprint
- User-friendly - for everyone
- Endless customisation potential
- Touchless making it an ideal solution for hygiene control

Turnstiles

Turnstiles are robust, highly durable and perfect for high use areas. The design of these gates makes them the optimal choice for internal or external use where there is a large and constant flow of people. Our solutions are also compact, requiring the smallest footprint of all entrance gates. The small installation area makes an ideal choice for sites where space is limited.

Tripod turnstiles are also the most cost-effective choice, perfect for organisations who have a smaller budget but still would like effective entrance control.

With low power consumption required for operation, the tripod turnstile is a more energy-efficient and economic choice for controlling entrances. Their minimalist but robust mechanism provides minimum service requirements and a low cost of ownership.

Benefits of Turnstiles

- Robust, highly durable solution for high traffic areas
- Energy efficient - low power consumption
- Passage in both directions is electronically controlled
- Compact solution with small footprint
- Customisable according to requirements
- Full and half-height variations available
- Wall or floor-mounting

Why Speedlanes & Turnstiles?

An ideal crowd control solution, speedlanes and turnstiles allow you to effectively manage and monitor the flow of people into and out of your building. Both are compatible with building access control systems, maximising security for building users and offer a cost-effective means of managing access. Turnstiles come in half and full height variations. For areas that require balustrade infill to close off gaps, we can provide glass balustrades to complement speedlanes and turnstiles.

Suitable applications

- Government
- Retail
- Finance
- Information Technology
- Telecommunications
- Banking
- Publishing
- Leisure
- Education
